

The Wall Mount Kit makes storing your Cyclone Rake really convenient. If you remove the wheels, the entire chassis and collector unit can be stored in a space just 8 inches deep. For safety, be sure to mount the hooks securely. Follow the directions below.

## Installation

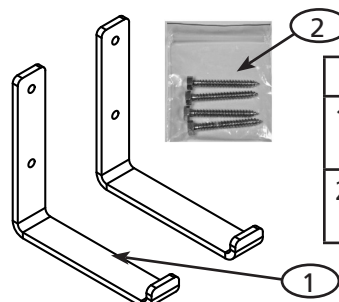

1. The hooks should be mounted with the bottom edges 74 inches from the floor for the Classic and Commander. For the Commercial PRO, XL and Z-10, the hooks should be mounted at 81 inches. You can mount them higher if you like. Space them 16 inches apart—the standard spacing for wall studs.
2. The hooks must be lag-bolted directly into 2 x 4 wall studs for strength. Use the 5/16 x 2.5 inch lag bolts provided. Drill 1/4 inch pilot holes to start the lag bolts. **Do not fasten into plaster board.** It won't hold. **Never use wallboard anchors.**
3. If you don't have 2 x 4 studs on 16 inch centers, install a secure cross brace and fasten the hooks to that. The brace should be at least a 1 x 8 board, securely nailed or lag bolted to the nearest wall studs. A piece of 2 x 8 lumber is even better. If you use a 1 x 8 board, use 5/16 bolts and nuts, **not wood screws**, to fasten the hooks.
4. To fasten to concrete or masonry walls, use masonry anchors (shown) and 5/16 lag screws. Masonry anchors are available in any hardware store. Be sure to get the size designed for 5/16 lag screws. **Never use plastic anchors.**

## How to Hang Your Cyclone Rake

To hang the Cyclone Rake most compactly, do as follows:

1. Fold up the Collector and put it on the hooks first, with the **J-hooks facing out** and at the top.
2. Then hang the main chassis, with the **hitch forks down and the wheels facing out**.
3. The chassis will hang much easier if you remove the wheels from the caster pads first. This greatly reduces the weight, and saves space as well. (**Tip: Always put the pins right back into the caster pads so you don't lose them.**)

### PARTS LIST

	NAME	QTY	PART NO.
1	Wall Mount Brackets	2	01-01-094
2	Bolt bag with (4) 5/16 x 2.5 inch lag bolts	1	01-01-289
