

Accidents happen, and you need to repair a hole or tear in your collector bag. This kit will let you fix most of the most common mishaps.

First, identify the type of tear you have:

**For straight cuts or slits up to 18 inches in length
the REPAIR TAPE is the way to go**

1. All repairs are made from the inside of the bag.
2. Wipe off the loose dirt and dust, then use the alcohol wipe to clean the PVC lining for at least two inches on either side of the tear.
3. Cut a piece of the repair tape two inches longer than the tear. Round the corners of the tape section to prevent peeling.
4. Start at one end of the tear and peel the backing as you press the tape over the tear. This works best if you can lay the bag on a flat surface so you can apply pressure as you put down the tape.
5. Allow the tape to cure for 24 hours before using the Cyclone Rake.

**For jagged cuts and holes
you'll want to use the FABRIC PATCH**

1. All repairs are made from the inside of the bag.
2. Cut the fabric to size, overlapping the hole by at least an inch. Round the corners of the patch to prevent peeling.
3. Wipe off the loose dirt and dust, then use the alcohol wipe to clean the PVC lining for at least two inches all around the tear.
4. Cover the entire PVC side of the patch with the flexible adhesive making sure you get right to the edges.
5. Place the patch over the hole and apply pressure. This works best if you can lay the bag on a flat surface so you can press the whole area of the patch.
6. Allow the bond to cure for 24 hours before using the Cyclone Rake.
