

The SPS-10

Let's Talk About It

This document will help you present the new SPS-10 and answer questions for our customers about this great new product. It's written in the form of Q&A so it's easy to use when customers ask questions.

- **What is the SPS-10?** - SPS-10 is the first of its kind property cleanup tool that allows the user to easily maintain a smaller property with a combination leaf blower, collector, and bagger. This system allows the user to **blow** debris from all corners of the property either directly into the woods or into a pile for collection. It comes complete with a 17' extension hose to collect materials from piles or hard to **reach** places and gives the user the opportunity to **bag** the debris for municipal collection using paper bags or the standard fabric bag for at home composting.
- **What's a typical size property that would use an SPS-10?** The SPS-10 is perfect for property sizes from .10 acres up to .50 acres (1/10th of an acre up to ½ an acre).
- **Why do you call it a 3 in 1 machine?** – The SPS-10 is really versatile and functions as 3 tools.
 - Blow Mode – You can use it to blow materials from all around your property. Blow them into the woods, onto the street (if you have street collection), or blow them into a pile.
 - Bag Mode – Use the collection hose to vacuum the debris and deposit it into either the included fabric bag or use paper bags for municipal collection. (These bags are available at ALL stores that sell outdoor power equipment (Lowe's, Home Depot, etc.)
 - Reach Mode – If you want to collect material from hard to reach places, use the included Power Vacuum Pickup to collect and bag debris from those hard to reach places – around the house and shed, window wells, fence lines and rock walls.
- When is it available? The SPS-10 will begin shipping on 10/7 and on 10/11, it will be 100% in stock and shipping in 1-2 business days just like all Cyclone Rakes.
- Does it ship for Free? – You bet...Just like the Cyclone Rake.
- How many boxes will arrive at my house? 3 Boxes
- How long does it take to put together? – Plan on about 1 hour and of course we provide a great manual and lots of assembly videos to use.
- What is the Warranty period? The warranty is 2 years (bumper to bumper) with the XR-950 Engine.
- How long is the Power Vacuum Pickup? The PVP gives you 17 feet of reach away from the unit. The Hose is 15' and the Wand is another 2'-3' (depending on the user settings).

- Do you have a risk-free guarantee like on Cyclone Rakes? You bet. The Guarantee is a 90-day, full money back guarantee including the cost of shipping both ways.
- What kind of tires are used? Pneumatic (air filled) tires.
- Do the tires have tubes? (Yes, they do.)
- Is the SPS-10 Self Propelled? No, the unit is not self-propelled. We built it with 4 pneumatic tires, so it moves easily over the ground.
- Do regular municipal bags fit on the SPS-10 – You bet. No problem.
- Are the handlebars adjustable? Yes.
- How long will it take to get to me? We'll ship it in 1-2 business days and depending upon where you live, it will arrive in 2-5 business days.
- What engine do you use on this? We use the XR-950 from Briggs and Stratton. This is the same engine we use on many of our Cyclone Rake models.
- What are the specifications?

| | |
|--------------|--|
| Airflow Rate | 2000 CFM |
| Length | 52" |
| Height | 41" (blow mode), 52" (collect mode) |
| Width | 31" |
| Weight | 185 lbs. |
| Wheels | 4 Pneumatic Wheels |
| Capacity | Municipal Bag = 25 Gal. (bag volume 30 Gal.) Fabric Bag = 22 Gal. |
| Assembly | Required for dolly but no assembly need for power unit |
| Blower Hose | 7" diameter |
| Impeller | Miracle Impeller using proprietary urethane compound |
| Housing | High Density Polyethylene |

- **Can you tell me about the great Features of the SPS-10?**
 - Capable of collecting/mulching 30 gallons of leaves in under 2 min.
 - Quickly swap municipal bags to reduce time spent on yard work
 - Works with all 30 gallon municipal bags
